REGULATION ANCHOR: NIS2 (DIRECTIVE (EU) 2022/2555)

NIS2 Article 21 posture, supply-chain integrity, dependency mapping that keeps up with reality.

WHAT THE SECTOR STRUGGLES WITH

- Supply-chain security measures under Article 21(2)(d) require evidence — most operators maintain a document, not a live posture.
- Incident notification windows (24h early warning / 72h full) collapse when vendor analysis takes 2 days.
- Entity-type reclassification under NIS2 broadened scope — many "essential entity" operators are running GRC tools scoped for a simpler world.
- Dependency maps drawn in Visio get stale the moment they're saved.

WHAT ERIO SHIPS OUT OF THE BOX

- Continuous NIS2 posture scored against Article 21(2)(a-j) with gap list + evidence anchors.
- n-tier supply-chain graph + sanctions + geopolitical overlays — dependency maps **live**.
- 24h/72h notification artefacts pre-filled from the live signal, with replayable inputs.
- DORA + NIS2 posture in the same workspace — one evidence pack for both regulators.

"NIS2 is a 24-hour game. ERIO takes vendor analysis from 2 days to 2 minutes." Sector brief · Nov 2026
