Know What to Decide Before Risk Decides

ERIO turns live external signals into quantified £ exposure and a board-ready briefing, so your next decision rests on evidence, not last quarter's register.

ANSWERS, NOT ALERTS

£ · 60-sec · audit trail

Open-FAIR Monte-Carlo

See exposure in pounds, not colours

Heat maps say 'amber'. ERIO says how much you could lose. Every live signal is scored and quantified in £, giving the CFO a number to defend.

9-theme risk ontology

Act on the world as it moves

Sanctions, supplier intelligence, SIEM alerts and news are ingested continuously and mapped to nine risk themes, so emerging threats reach the board before they reach the press.

Tamper-evident audit trail

Sits above your GRC, never replaces it

Archer, ServiceNow and MetricStream prove you complied. ERIO adds the decision layer on top, with every briefing traceable, role-controlled and available in English, French, German and Spanish.

THE STACK — external signal becomes boardroom clarity in four layers
